IDENTIFIERS	Colorado

ABSTRACT

This basic vocational related skills assessment module in automotive mechanics is one of sixteen modules designed to help teachers assess and identify some of the areas in which special needs students may encounter learning difficulties. The materials in the module allow for informal assessment in three basic areas: academic skills, motor skills, and vocational interest and awareness. The basic skills assessment includes reading skills, listening skills, using a book to locate information, and mathematics. The reading section offers materials written at two different reading levels: the first paragraph is easy (4-8), while the second paragraph is more difficult (9-12). The motor skills are assessed through teacher observation and recording on a matrices skills checklist. The third area, vocational interest and awareness, is assessed through a vocational awareness questionnaire completed by students. (LRA)

DESIGN AND IMPLEMENTATION OF AN ASSESSMENT MODEL FOR STUDENTS ENTERING VOCATIONAL EDUCATION PROGRAMS IN THE STATE OF COLORADO

Each learner should be considered as unique. All students have unique characteristics which are considered by alert teachers in their efforts to foster more effective learning. This is especially true in vocational programs where our opportunities to know each learner are greater than in some other classroom situations.

Douglas Towne
Sydney Wallace

The purpose of this project was to develop materials that could be utilized for informal assessment of students in vocational programs. The materials were then developed into a series of sixteen modules representing the seven service areas of vocational education. These modules will enable teachers to assess and identify some of the areas in which special needs students may encounter learning difficulties.

This project and the resulting modules are based on the assumption that one of the ways that vocational education can provide training "appropriate to the needs and progress of each ... individual," is to assess the needs of each individual. Another assumption is that "modifying" a vocational program may be done in many ways but cannot be done effectively until assessment of student needs has been completed. The modules will provide information that will enable vocational teachers to modify their materials or lessons based on the results of the assessment information.

Information which you obtain from the assessment may be used in the following ways:

grouping of students with similar instructional needs
placement of students in programs
modification of instructional materials
writing goals and objectives for the student
obtaining remedial help
as a model to devise your own materials
writing contracts for behavioral change
giving specific information to supplemental services or support staff for assisstance

Identification of learning problems clarifies the various level of abilities and the learning styles of students. This necessitates individualizing vocational programs and instruction.

The modules include basic academic skill assessment, motor skill assessment, and interest assessment.

The following vocational areas are included in the modules:

1) *Welding*
2) *Sheet Metal*
3) *Agriculture*
4) *Graphic Arts*
5) *Woodworking*
6) *Automotive*
7) *Autobody*
8) *Drafting*
9) *Health Occupations*
10) *World of Work*
11) *Food Preparation*
12) *Child Care*
13) *Distributive Education*
14) *Electricity*
15) *Horticulture*
16) *Business and Office Occupations*

The assessment of student abilities are important for success in the vocational classroom. The basic skills assessment includes Reading Skills, Listening Skills, Using a book to locate information, and Mathematics. The mathematics section covers many of the basic operations and applications of math that is needed in vocational classes.

The reading section offers paragraphs written at two different reading levels; the first paragraph being easy (4-8), the second paragraph more difficult (9-12). Those students who have trouble with both paragraphs will find it difficult to learn through reading.

As a result of the field testing comments, there are two areas which are only included in the module entitled, World of Work. These two areas are "Following Directions" and "Safety Warnings Quiz". They were judged too "easy" for inclusion in all modules. This module was written specifically for students in disadvantaged and handicapped programs.

Materials are color coded for ease of usage and efficiency.

Yellow - *Student Sheets*
White - *Vocational Awareness Questionnaire*
Salmon - *Matrices*
Green - *Teacher Materials*
Gold - *Class Scoring Sheets*

DAILY LIVING COMPETENCIES

PERSONAL CHARACTERISTICS

MOTOR SKILLS

MATRICES
SKILLS CHECK LISTS

DIRECTIONS TO THE TEACHER:

* This section is designed to assess capabilities that are not easily quantifiable. Therefore, you will use these as observation instruments.
* More than anything else, these are to be used as diagnostic tools to help establish goals and objectives.
* Using the matrices, observe the student over a period of several weeks in several different situations.
* There are many reasons for poor or below average levels of performance. These may include environmental influences and health, i.e., stress, nutrition, physical limitations. The matrices are merely a guide to reflect how well a student is doing in your area.

DIRECTIONS: Please check the level each student is at according to the following scale.

1. poor
2. below average
3. average
4. good
5. very good
6. n/a

STUDENT	MATRIX SKILLS CHECK LIST															
DAILY LIVING COMPETENCIES:																
Can give personal information																
Money concepts																
Transportation abilities																
Job seeking skills																
Completes work																
Understands directional terms																
Understands safety rules																
Demonstrates cooperation with others																
Punctuality																
Attendance																

DIRECTIONS: Please check the level each student is at according to the following scale.

1. poor
2. below average
3. average
4. good
5. very good
6. n/a

STUDENT MATRIX SKILLS CHECK LIST															
PERSONAL CHARACTERISTICS:															
Grooming															
Personal Hygiene															
Physical Tolerance Full Workday															
Peer Relationships															
Self Confident															
Works Well Alone															
Works Well in Group															

DIRECTIONS: Please check the level each student is at according to the following scale.

1. poor
2. below average
3. average
4. good
5. very good
6. n/a

STUDENT MATRIX SKILLS CHECK LIST													
WORK APTITUDES:													
Follows Written Instructions													
Follows Verbal Instructions													
Follows Demonstration													
Retains Instructions													
Improves with Repetition													
Conceptualizes the Problem													
Follows Multi-stepped Instructions													
Uses good judgement													

DIRECTIONS: Please check the level each student is at according to the following scale.

1. poor
2. below average
3. average
4. good
5. very good
6. n/a

STUDENT / MATRIX SKILLS CHECK LIST													
MOTOR SKILLS:													
Perform Manipulative Tasks													
Move Around Objects													
Use Large Tools													
Small Motor-eye-hand Coordination													
Two Hand Coordination													
Use Small Tools													
Finger Dexterity													
Steady Work Pace													
Heavy Lifting													

READING SKILLS

DIRECTIONS TO THE TEACHER:

This instrument is designed to assess how well the student understands written materials. The skills are broken into vocabulary, (Question 1-5), main ideas, (Question 6), details or facts, (Question 7), and inference or logical deduction, (Question 8).

1. Have students read each paragraph and then answer the questions on the following page. The students may refer to the original paragraph while completing the questions. (Time: approximately 15 minutes).
2. Collect all sheets.
3. Correct worksheets.

Vocabulary

a. For each vocabulary word listed (Questions 1-5), the student should leave a definition or synonym that shows an understanding of the word as it is used in the sentence. Score vocabulary questions as one (1) point each. Five (5) is a perfect score; zero (0) means none are correct.

Main Idea

b. In Question Six (6) you will assign a score of 1-5. The score should be based on how completely the student comprehends the paragraph.
   1) little knowledge or comprehension
   2) some grasp of paragraph
   3) fair idea of paragraph's content
   4) good idea of paragraph
   5) description which tells what the whole paragraph is about

Details

c. In Question Seven (7) a full score, five (5) points, should be based on whether the student puts down the two important facts.
   1) any one fact in the paragraph
   2) any two facts in the paragraph
   3) one fact that answers the statement well
   4) one fact that answers the statement well and any one that is in the paragraph
   5) Two facts that answer the statement well

Inference

d. In Question Eight (8) you are looking for an understanding that goes beyond what is in the paragraph.

1) any attempt to answer

2) any answer that even addresses the question

3) some idea of an extension of the basic knowledge

4) 5) a good answer which shows an understanding of the implications of the question.

EXAMPLE: A few words which describe what a good title for the paragraph is about would receive a score of four (4).

4. Total the scores (1-8), for each paragraph.

EXAMPLE:

	Paragraph 1		Paragraph 2		TOTAL
Vocabulary	_____	+	_____	=	_____
Main Idea	_____	+	_____	=	_____
Details	_____	+	_____	=	_____
Inference	_____	+	_____	=	_____

5. Enter the score from each area and the total on the class scoring sheet.

6. Paragraph one was chosen for student who have lower reading levels. Paragraph two was chosen for students who read at the high school level.

AUTOMOTIVE
READING SKILLS I

READ THIS PARAGRAPH:

Care should be taken with gasoline engines. FUMES from cars contain carbon monoxide (car'-bun-mun-ox'-ide), a DEADLY POISON. You must have FRESH air in the shop. A poorly AIRED shop can cause you to get sick or even die. How could you solve your problem if the shop was without fresh air?

ANSWER THE QUESTIONS ON THE NEXT PAGE

Automobile Mechanic, Prevocational Series, Delmar Publishers, Albany, NY, p.39.

NAME_____

AUTOMOTIVE
READING SKILLS I

DIRECTIONS TO STUDENT:
Please tell what the following words mean as they are used in the previous paragraph.

1. FUMES_____

2. DEADLY_____

3. POISON_____

4. FRESH_____

5. AIRED_____

VOCABULARY_____
(0-5)

6. What is this paragraph about?_____

MAIN IDEA_____
(1-5)

7. Name two possible results of a job with no fresh air.
(1)_____
(2)_____

DETAILS_____
(1-5)

8. How can you check to find out what's wrong with your alternator?

INFERENCE_____
(1-5)

TOTAL SCORE_____

AUTOMOTIVE
READING SKILLS II

READ THIS PARAGRAPH:

Let's look at the possible troubles that an alternator might have and find out what to do when trouble occurs. In most shops, when an alternator or separately MOUNTED alternator regulator shows signs of trouble, the old unit is removed and replaced with a new or REBUILT unit. This is called an R and R job. When you work in the shop, you will learn how to use METERS or an oscilloscope to check alternator action and how to remove and replace the units. One important part of the job is to make sure that the belt TENSION is correct. And, of course, if the belt is WORN, you should replace it.

ANSWER THE QUESTIONS ON THE NEXT PAGE

William H. Crouse, The Auto Book, McGraw-Hill Book Company, 1974.

NAME_____

AUTOMOTIVE
READING SKILLS II

DIRECTIONS TO THE STUDENT:

Please tell what the following words mean as they are used in the previous paragraph.

1. MOUNTED_____

_____

2. REBUILT_____

_____

3. METERS_____

_____

4. TENSION_____

_____

5. WORN_____

_____

VOCABULARY_____
(0-5)

6. What is this paragraph about?_____

_____

MAIN IDEA_____
(1-5)

7. Name two ways to check on a alternator.

(1)_____

(2)_____

DETAILS_____
(1-5)

8. Why is it important to check car equipment?_____

_____

INFERENCE_____
(1-5)

TOTAL_____

LISTENING SKILLS

DIRECTIONS TO THE TEACHER:

This test is designed to indicate how well your students use their auditory skills. They will be listening to a passage that is read two times. Then they will fill in the missing words on the answer sheet.

In order to utilize the Listening Skills Unit, the listening skills paragraph needs to be taped or read to the students by you.

Please read the directions on the student sheets to the class. The students may write on their answer sheets at any time during the two readings. The students should be asked to read the test sheet before listening to the tape.

GRADING:

The number correct is the total number of correct words filled in the blanks. Please accept reasonable substitutes for the words. Overlook poor spelling.

AUTOMOTIVE
LISTENING SKILLS

Antifreeze Solutions

Water freezes at 32° F. If water freezes in the engine cooling system, it stops coolant circulation. Some parts of the engine will overheat, and this could seriously damage the engine. What is worse, when water freezes, it expands. Water freezing in the cylinder block could expand enough to actually crack the block. Water freezing in the radiator could split the radiator seams. Both conditions cause serious damage. A cracked cylinder block cannot be repaired satisfactorily. A split radiator is also hard to repair.

As you can see, freeze-up of the cooling system can completely ruin the engine. To prevent freeze-up, antifreeze is added to the water. A mixture that is about one-half water and one-half antifreeze will not freeze even if the temperature reaches -34°F (34° below zero), and it seldom gets that cold anywhere in the United States. Higher concentrations of antifreeze in water will prevent freeze-up of coolant at temperatures as low as -84° F.

The most commonly used antifreeze is ethylene glycol. Some antifreeze compounds also fight small leaks in the cooling system radiator. These antifreeze compounds contain tiny plastic beads or inorganic fibers. They circulate freely with the coolant. If a leak develops, the beads or fibers jam in the leak and plug it. Of course, they will not help if the holes are too large.

PARAGRAPH TO BE READ OR TAPED

ANSWERS

Why Anti-freeze Solutions are so Important:

The problem of water freezing:

1. Water freezes at 32° F.
2. If it freezes, it stops the coolant from circulating.
3. If this happens, some of the parts of the engine will overheat and cause serious damage.
4. When water freezes it expands.
5. If water freezes in the cylinder block it can crack the block.
6. If water freezes in the radiator, it can split the seams.

How to use anti-freeze:

1. Anti-freeze is added to water to prevent freeze-up.
2. A mixture that will not freeze until below 34° F. Below zero is one-half water and one-half anti-freeze.
3. More anti-freeze will prevent freeze-up to -84° F.

Types of anti-freeze:

1. Most common is ethylene glycol.
2. Some fight small leaks in the radiator.
3. These anti-freeze have tiny plastic beads or fibers in them.
4. If a leak develops, the beads or fibers jam in the leak and plug it.
5. They will not help if the leaks are too large.

LISTENING SKILLS

DIRECTIONS TO STUDENT:

You will hear a passage read from the book just mentioned. The passage will be read once quickly and then again slowly.
Listen carefully to the passage each time it is read. As you listen to the passage being read fill in the blanks. You will fill in the facts that you hear on your answer sheet.

READ YOUR SHEET THROUGH BEFORE LISTENING TO THE TAPE.

NAME _____

AUTOMOTIVE
LISTENING SKILLS - Student Work Sheet

Why Antifreeze Solutions are so Important:

The problem of water freezing:

1. Water freezes at _____.
2. If it freezes, it stops the _____from circulating.
3. If this happens, some of the parts of the engine will _____ and cause serious _____.
4. When water freezes it _____.
5. If water freezes in the cylinder block it can _____ the block.
6. If water freezes in the radiator, it can _____ the seams.

How to use anti-freeze:

1. Anti-freeze is added to water to _____ freeze-up.
2. A mixture that will not freeze until below 34° F. Below zero is one-half _____ and one-half _____.
3. More _____ will prevent freeze-up to -84° F.

Types of anti-freeze:

1. Most _____ is ethylene glycol.
2. Some fight small _____ in the radiator.
3. These anti-freeze have tiny plastic _____ or fibers in them.
4. If a leak develops, the beads or _____ jam in the leak and plug it.
5. They will not help if the leaks are too _____.

PARTS OF A BOOK

DIRECTIONS TO THE TEACHER:

Being able to locate information in a book is an important skill in most vocational areas. This test is designed to indicate the student's information locating ability in using a TABLE OF CONTENTS and an INDEX.

The student will use a table of contents and an index from your vocational area to answer five questions for each of the two areas. CAUTION students that the Table of Contents and/or Index may have more than one page. Ask students to check all pages before writing down their answers.

SCORING:

Correct the two parts and enter the total score on the class-scoring sheet.

Example:

Score - Table of Contents . . . . . _____

Score - Index . . . . . + _____

(0-10) _____

AUTOMOTIVE AND AUTO BODY
PARTS OF A BOOK

ANSWERS:

Table of Contents

1. Page (s) 423
2. Page (s) 540
3. Page (s) 389
4. Page (s) 459
5. Page (s) 525

Index

1. Page (s) 119-120
2. Page (s) 45-
3. Page (s) 389-421
4. Page (s) 503-507
5. Page (s) 292

PARTS OF A BOOK

DIRECTIONS TO THE STUDENT:

There will be two parts to this section.

Using a Table of Contents
Using an Index

*Answer the Table of Contents questions by using the Table of Contents that follows.

*Answer the Index questions by using the Index that follows.

MATHEMATICS TEST

DIRECTIONS TO THE TEACHER:

This test is designed to assess skill areas that might be needed in a vocational class.

The skills cross vocational areas.

The first ten questions comprise a basic skills assessment. The rest of the test uses various kinds of skills in diverse mathematical areas.

A student should not spend too much time on any one problem. He/she should be given extra time if necessary.

1. Allow one hour for students to complete this test.
2. Score the answers on the students' test.
3. Subtract the number missed from forty-two (42).
4. Enter the score on the class scoring sheet.

It is easy to tell which areas a student is weak in by referring to the test itself.

This is important when there are only a few wrong.

DESIGN AND IMPLEMENTATION OF AN ASSESSMENT MODEL FOR STUDENTS ENTERING VOCATIONAL EDUCATION PROGRAMS IN THE STATE OF COLORADO

MATHEMATICS

DIRECTIONS TO THE STUDENT:

*TRY EACH QUESTION.

*DO NOT SPEND A LONG TIME ON ANY ONE QUESTION.

*USE THIS SHEET TO WORK OUT ANSWERS.

*ASK FOR AN EXTRA SHEET OF PAPER IF YOU NEED IT.

* DO NOT WORRY IF SOME QUESTIONS ARE TOO HARD FOR YOU.

NAME_____

MATHEMATICS TESTING SECTION

DIRECTIONS TO STUDENT:
Solve each problem and put answer in the space provided. Don't spend alot of time on any one problem.

ANSWERS

1a. $\begin{array}{r} 6 \\ +7 \\ \hline \end{array}$ b. $\begin{array}{r} 782 \\ +591 \\ \hline \end{array}$

1a. _____
1b. _____

2a. $\begin{array}{r} 18 \\ -12 \\ \hline \end{array}$ b. $\begin{array}{r} 4001 \\ -2379 \\ \hline \end{array}$

2a. _____
2b. _____

3a. $\begin{array}{r} 1/5 \\ +3/5 \\ \hline \end{array}$ b. $\begin{array}{r} 7\ 1/2 \\ +3\ 3/8 \\ \hline \end{array}$

3a. _____
3b. _____

4a. $\begin{array}{r} 5/7 \\ -1/7 \\ \hline \end{array}$ b. $\begin{array}{r} 3\ 5/8 \\ -1\ 7/8 \\ \hline \end{array}$

4a. _____
4b. _____

5a. Add: 14.6 to 3.07 b. Add: $\begin{array}{r} 1\text{ft.}8\text{in.} \\ 1\text{ft.}9\text{in.} \\ \hline \end{array}$

5a. _____
5b. _____

NAME _____

Mathematics Testing Section

ANSWERS

5c. Subtract: 15.63 from 18.5

d. Subtract:
3 meters 3.0 CM
-2 meters 55 CM

5c. _____

5d. _____

6a. 12
x 3

b. 429
x306

6a. _____

6b. _____

7a. $5\overline{)25}$

b. $26\overline{)2782}$

7a. _____

7b. _____

8a. 7 x 2 ½

b. 1 3/4 x 2 ¼

8a. _____

8b. _____

9a. 6 ¼ ÷ ½

b. 7 5/8 ÷ 1 7/8

9a. _____

9b. _____

10a. .06
x.05

b. 10.2
x .37

10a. _____

10b. _____

10c. _____

10d. _____

c. $8\overline{)64.8}$

d. $2.50\overline{)17.5}$
